

ETHICAL STATEMENT

Manuscript Title: Record-Level Evaluation of a Morlet CNN-Conformer for Five-Class ECG Beat Classification

Authors: Alireza Abbaszadeh, Vahid Torkzadeh

Target Journal: *Revista Portuguesa de Cardiologia*

1. Ethics Approval and Consent to Participate: Formal institutional review board (IRB) approval and individual patient informed consent were not required for this computational study. All analyses were conducted entirely using the publicly available, open-access, and fully de-identified MIT-BIH Arrhythmia Database distributed via PhysioNet (<https://physionet.org/content/mitdb/1.0.0/>). No new human participants or animals were recruited, contacted, or subjected to experimental procedures.

2. Compliance with Ethical Principles: The investigation conforms to the ethical guidelines for retrospective research on anonymized public health datasets and adheres to the principles of the Declaration of Helsinki.

3. Conflict of Interest / Competing Interests: The authors declare that they have no known competing financial interests, employment relationships, or personal affiliations that could have appeared to influence the findings or interpretation reported in this paper.

4. Funding: This research did not receive any specific grant or financial support from funding agencies in the public, commercial, or not-for-profit sectors.

5. Generative AI Assistance Declaration: ChatGPT was used strictly for grammatical refinements and linguistic drafting during the preparation of this manuscript. The authors critically reviewed, verified, and edited all text and data, taking full intellectual and ethical responsibility for the contents of the final publication.
